SEMANTIC UNIT DECISIONS:

60

0-element of the Syntax Type String = 'NOUN' --➤ object 'INFORMATION'
0-element of the Syntax Type String = 'VERB' ⟶ object 'INFORMATION'
0-element of the Syntax Type String = 'SUBCONJ' --➤ object 'INFORMATION'
0-element of the Syntax Type String = 'PREP' --➤ object 'INFORMATION'
0-element of the Syntax Type String = 'DET' --➤ object 'ATTRIBUTE'
0-element of the Syntax Type String = 'ADV' --➤ object 'ATTRIBUTE'
0-element of the Syntax Type String = 'ADJ' --➤ object 'ATTRIBUTE'
0-element of the Syntax Type String = 'INFTO' --➤ object 'ATTRIBUTE'
0-element of the Syntax Type String = 'QUAL' --➤ object 'Information

61 62

CONNECTION DECISIONS:

63

1) SyntaxTypeString (element 0) = VERB
Slot (element 0) = the other word's position
OtherSyntaxType String (element 0)= NOUN

⟶ Create agentrole connection (typ 0)

2) SyntaxTypeString (element 0) = VERB
Slot (element 1) = the other word's position
OtherSyntaxTypeString (element 0) = NOUN
No passive form
No gerund form

⟶ Create objectrole connection (type 1)

3) other words entry type is 2

⟶ Create attribute connection

4) SyntaxTypeString (element 0)= NOUN
OtherWord = WITH

⟶ Create scaling exchange connection

5) OtherSemanticalTypeString = NNOUN

Fig. 6A

SyntaxTypeString (element 0) = NOUN

→ Create HorizontalRelation

6) word = WHILE
otherSyntaxTypeString (element 0) = VERB

→ Create horizontal relation (type 12)

7) otherWord = WHILE
syntaxTypeString (element 0) =VERB

→ Create horizontal relation (type 12)

63

8) syntaxTypeString (element 0) = VERB
otherSyntaxTypeString (element 0) = VERB
Gerund form

→ Create agent role connection (type 0)

9) SyntaxTypeString (element 0)=VERB
Slot (element 2) = the other word's position
OtherSyntaxTypeString (element 0) = NOUN
No passive form

→ Create beneficiary role connection (type 7) (indirect object)

Fig. 6B
